

# Quick-Fix: Replacing a Zipper Pull

A quick fix for replacing a zipper pull on your Patagonia jacket.

Written By: Brittany McCrigler

## INTRODUCTION

A missing or broken pull on a zipper can make life difficult when you try to open and close your Patagonia jacket. This guide will show you a quick-fix method you can use in the field or as an interim solution until you can replace your slider. Don't have a zipper pull? A loop of very thin cord or string will not only work, but make MacGuyver proud.

For replacement parts or further assistance, contact [Patagonia Customer Service](#).

### PARTS:

- [Zipper Pull Tab](#) (1)
-

## Step 1 — Pull

- Grab your zipper pull.
- Thread the cord of the zipper pull through the hole on the slider where the pull used to be.

## Step 2

- Make a loop with the cord that has passed through the hole.
- Feed the rubber end through the loop.

## Step 3

- Pull the rubber part through the loop, then pull it tight.
